

Technical Data Sheet

PE Anti-Mouse F4/80

Catalog Number: 202507, 202508

Size: 25 tests, 100 tests

Target Name: EMR1, Ly71

Regulatory Status: RUO

Product Details

Clone: BM8

Application: FC

Reactivity: Mouse

Format: PE

Isotype: Rat IgG2a

Antibody Type: Monoclonal

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA

Protein Concentration: Supplied at a lot-specific concentration.

Storage&Handling: The antibody solution should be stored undiluted between 2°C and 8°C, and protected from prolonged exposure to light. Do not freeze.

Recommended Usage: For flow cytometric staining, it is recommended to use 5 µL of this reagent per 0.5-1.0 million cells in a 100 µL volume. Optimal reagent performance should be determined by titration for each specific application.

Excitation Laser: Blue Laser (488 nm) Green/Yellow laser (532/561nm)

Release Date: Dec-25

Background Information

F4/80 is a 160 kDa cell surface glycoprotein and a member of the epidermal growth factor (EGF)-transmembrane 7 (TM7) family of adhesion G-protein-coupled receptors. Also referred to as EMR1 or Ly71, F4/80 is a well-established marker of murine macrophages. It is broadly expressed on the majority of tissue-resident macrophages, including peritoneal macrophages, lung macrophages, gut lamina propria macrophages, thymic and bone marrow stromal macrophages, splenic red pulp macrophages, Kupffer cells in the liver, and Langerhans cells in the skin. Notably, F4/80 is absent from macrophages located in T cell zones of the spleen, lymph nodes, and Peyer's patches. It has also been detected on a subset of dendritic cells, reflecting its heterogeneous expression pattern that can vary with macrophage maturation and activation

Product Data

RAW267.4 were stained with either PE Anti-Mouse F4/80 clone BM8 (color-filled histogram) or an isotype control (gray histogram).
